On a scale from 0 to 100, how complicated do you think a retina is?

0

What does the article say is the leading cause of vision loss? Retinal Diseases

Which section did you find your answer? The Big Picture

Think about Dr. Schwartz’ study. Why would it be important to work in darkness?

He can control what the eye sees.

How does Dr. Schwartz do his work?

A. Alone because he is so smart and knows all the answers.
B. Alone because few people can do the work that he does.
C. In a small team because his closest friends can help him work faster.
D. In a large group because he collaborates with people so they can share ideas and divide up the work.

How do you know this answer is correct? It says so in The Solution.

Why would a prosthetic retina be a good thing? It would help people see.
